Verksamhetsrapport MRCIT, LP4 2018

Master Reception Committee | Activity report, LP4 2018

Since last Sektionsmöte, our work has mainly involved:

- Continuity;
- Internal and external meetings discussing, planning and budgeting for the reception;
- Work to strengthen our communication and collaboration with students and the IT section in general;
- Investigation and treatment of our GDPR commitments; and
- The welcoming of new students.

Welcoming New Students

Since international students have already received their invitations to Chalmers, Facebook groups for the next year students on the programmes *Interaction Design and Technology* and *Software Engineering and Technology* have already been established. These can be found under MRCIT's Facebook page, or by clicking the hyperlinks above. They have currently been spread to *Next Stop Chalmers*, where many international students get ready for Chalmers.

These groups are intended to be hubs for students of each respective programme in 2018-2019. They are not intended to be MRCIT-specific; we only hope to provide an umbrella to organise the groups, especially during the critical first few weeks, and will not administrate them in the long run.

We encourage any current 1st year Master students of these programmes to join these groups, as your experience will most certainly be of interest to the new arrivals.

The groups were made under MRCIT's Facebook page in an effort to increase coherency and community. This way, any information spread on Facebook about the reception is more likely to reach students of the programmes and with MRCIT as an umbrella page for the groups, students in different programmes might have an easier time to reach each other.

Of course, Facebook will not be our only information channel. For more on the subject, see our *verksamhetsplan* (operational plan).
